

Jobs with borders

Any artwork submitted with borders must be well within the safety zone. We highly recommend staying away from designs with very thin borders. We suggest using borders at least 1/8" or more. We cut through many sheets at a time, therefore the slightest imperfection in the cut will become very obvious in designs with very thin borders, see below.

this border is too close to the cutline. it will be cut off-center.

finished job might end up like this.
